COMPANY BROCHURE

About Us

MIFI Systems, INC is a leading global consulting and IT services company that offers a wide array of solutions for a range of key verticals and horizontals. MIFI has established its roots in delivering quality solutions by employing the best engineers in USA and India. We are offering a different kind of onsite Development and offshore outsourcing at very low rates (i.e. 70% savings) guaranteed. MIFI has support centers and development centers in USA and in India serving different clients across the world and following a specially developed Business Continuity Model (BCM), which allows continuing mission critical operations of the clients even in the most challenging times.

Our fast growth and expanding list of satisfied clients are testimony to our ability to consistently provide system solutions cost effectively and on schedule. MIFI has been adding to its team a group of software and business consulting professionals to deliver high quality consulting expertise, solution development and product delivery capabilities to its customers. Besides our experience, skills and the cost advantage, we offer friendly service, confidentiality and will be a partner you can rely on.

Our Mission

MIFI positions itself as a leading provider of software services for small to medium sized companies in USA. Every company finds it a challenging problem to choose a reliable partner. Companies always realize that they find the real problem solver each time MIFI delivers the project on time. In the past, MIFI has built its recognition among the clients. Not only has MIFI saved significant development cost for the clients, but delivered extraordinary value-added services with its elite management and development teams.

Our Vision

Openness and Honesty

We need to communicate with each other in a straightforward and open manner. We should always be able to constructively say what we think.

Taking Responsibility

We take the initiative, make decisions and assume responsibility. We acknowledge mistakes and learn from them.

Trust

It is important that we trust one another. If we make a promise to do something we will do it.

Teamwork and Support

Together we can achieve anything.

Enthusiasm and Passion

Business should be fun. The happier we are the more enthusiastically we face new challenges and the more passionate we are about reaching our vision.

Fairness and Consistency

It is important that our behavior is consistent and defensible at all times. We need to think before we act.

Simple Cost Effective Common Sense Solutions

By using common sense and doing what comes naturally we avoid complicated solutions.

Daring to be Different

We dare to be different. We find new and better ways to do things. "Why" is a very important word In MIFI? Why must we do things in the traditional way?

Software Development Methodology

MIFI has developed and implemented outsourcing software development methodology integrating the philosophy behind CMM with our long-term project delivery methodology. A strong CMM discipline alone offers advantages with respect to quality. However, strict adherence to CMM without recognition of requirements for speed and agility can cripple the software development effort from the start.

MIFI project life cycle can be grouped into four phases including: Project Startup, Business Prototype & Requirements, Analysis & Design, Implementation & Testing and Project Completion. The following sections describe each of these phases

How We Guarantee Successful Delivery

MIFI is focused on ensuring that all projects meet our customer's requirements and expectations. The following three aspects of our project methodology have been proved to guarantee the successful delivery in our three years software development practice:

Code Quality Assurance

We have a repeatable, effective software development process and a well-proven testing methodology based upon CMM level 3 ensures the high quality of code and successful delivery to our global clients.

Also we have a complete set of internal code review and functions walkthrough policy which contains co-worker review, peer review, cross walkthrough, and group walkthrough to ensure the code quality.

Schedule Assurance

To ensure projects are delivered on time we have developed a policy that is aimed to provide adequate visibility into actual progress and manage associated deviations from the schedules. Every week MIFI will release a project status report and a plan for the following week. This provides your project manager with a weekly control point for schedule management.

Budget Control

We recognize our quotation process is critical to ensuring overall project success. Our weekly work reports will detail clearly how the project is tracking against the agreed budget. Any defect fixes during the 3 month warranty period are free of charge. Also, we have well-defined roles and responsibilities to ensure the pipelined developing lifecycle and reduce the cost.

Conclusion

In United States, MIFI is one of the software outsourcing provider. We have gained high satisfaction from our customers. The target of MIFI is to establish a leading position in the US software industry in next five years. We will:

- Provide complete IT outsourcing services to large-sized and medium-sized enterprises in Europe and U.S. The services include onsite/offsite software development, technical consulting, onsite/offsite supporting and related training and testing.
- Establish branches in the major countries of Europe and North America as well as develop distributors to support online marketing and sales.
- Upgrade our IT services and enhance the technology capability of employees to meet more and more the technology require of our customers.
